Summary

RPA Developer with 4+ years of experience in Automation Anywhere A360 and UiPath,PowerAutomate specializing in intelligent automation, document processing, and API integrations. Proven track record in building scalable automation solutions with AI capabilities, improving efficiency and accuracy. Currently focused on Agentic AI and modern automation frameworks.

Skills

- **RPA & Automation:** Automation Anywhere A360 (Bot Developer, AARI, Document Automation), UiPath (Development & Migration), End-to-End Automation, Process Optimization.
- **Intelligent Automation & AI:** AI Builder (OCR, Form Processing), Intelligent Document Processing (IDP), LLM Integration, Agentic Process Automation (APA), Data Validation & Decision Automation.
- **Integration & Technologies:** REST APIs, Web Services, JSON, SharePoint Integration, ERP Integration (NAV), Email Automation (Outlook/Mail Servers).
- **Programming & Scripting:** Python, VBScript, SQL (Basic).
- **Data & Tools:** Excel Automation (Advanced), PDF Processing, Database Handling.
- **Development & Support:** UAT, Deployment, Debugging, Exception Handling, L1/L2 Support, Logging & Monitoring.

Experience

Tangentia | Trivandrum
RPA Developer
10/2025 - Current

Vendor Quote Automation.

The project automates the handling of vendor emails containing structured order or product data. Incoming emails are received in the INF Mail Server, where they are validated based on predefined criteria. Automation Anywhere monitors the mailbox, extracts the attached data, and processes it using AI for classification and data preparation. The processed data is then transferred via the INF Integration Layer through an API, which enriches and verifies the information using Vendor APIs and NAV master data. After successful verification, the data is passed to the ERP system (NAV) for RSQ creation, while failures are logged for follow-up handling. Special scenarios and vendor scope must be defined as part of the implementation.

Reduce manual effort and repetitive tasks while minimizing human error, and improving data quality.

Alzone software - client : HP India |
Trivandrum
Software Engineer

MAF (Manufacturing Authorization Form) Automation

Automated the process of generating MAF (Manufacturing Authorization Form) letters for HP India's Tier-2 partners. Used Automation Anywhere and SharePoint to extract partner information from emails, perform verification, and create MAF requests. The bot also handles MAF letter generation, approval, and updates the status in SharePoint.

This automation reduced the processing time per transaction from 45 minutes to 5 minutes

Alzone Software pvt Ltd | Trivandrum

Direct Debit Job Verification (Migration - UiPath to AA)

Software Engineer

Migrated UiPath workflows to Automation Anywhere A360 using a lift-and-shift approach with necessary business logic adaptations. Automated the verification of Direct Debit job names and ensured accurate dataset handling. Developed a bot to extract job details and upload them into the EWAT application. Supported the UAT phase with test case creation, issue resolution, and documentation. Enhanced bot reliability through rigorous debugging and exception handling mechanisms.

Alzone Software pvt Ltd | Trivandrum
Software Engineer

PreNote Job Verification (Migration - UiPath to AA)

Successfully transitioned PreNote validation workflows from UiPath to A360. The process included job name validation, data downloading, and structured upload to EWAT. Applied dynamic logic adjustments for compatibility with Automation Anywhere. Collaborated closely with business users to ensure smooth execution during UAT, and post-deployment. Ensured data integrity and minimized errors through iterative testing and logic refinement.

Software Engineer

Freight Clearance Automation

Implemented a robust RPA solution using document automation for extracting data from PDF invoices. The bot processed documents from various logistics clients, validated extracted fields, and performed automated entries into the Dubai Trade Portal. Extended automation into finance by downloading account statements and processing payments in internal systems (iPack and Aware). Handled OCR challenges, improved extraction rates, and collaborated with stakeholders to refine logic and meet SLAs.

Education and Training

Easa College of Engineering And Technology | Coimbatore
Bachelor of Technology in Information Technology
08/2021

Certifications & Licenses

Automation Anywhere Advanced and Master RPA Professional.

Bot Developer (Automation 360)

Agentic Process Automation Developer Masterclass.

Agentic Process Automation: Partner Practitioner Program.

Document Automation Masterclass.

IQ Bot Badge.

L1, L2 Support Certificate
