

Roystan Prajwal Dsouza
Azure Data Engineer

Email: roystan0518@gmail.com
Mobile: +91 9606490428

Career Summary

- Having 4.3+ years of IT experience in Azure Data Engineer including Azure Data Factory, Data Lake Storage, Databricks, Pyspark, Spark SQL, Logic Apps, Synapse Analytics and Power BI.
- Good hands-on experience in creating Pipelines in ADF using Linked Services, Datasets, Pipeline and Dataflow to Extract, Transform and load data from different sources like Azure SQL, Blob storage.
- Extensive experience in Extract Transform and Load data from Source Systems to Azure Data Storage services using a combination of **Azure Data Factory**, T-SQL, Spark SQL Data Ingestion to one or more Azure Services - (**Azure Data Lake, Azure Storage, Azure SQL**).
- Used Control Flow Tasks like For Each Activity, Switch Activity, Get Metadata Activity, If Activity, Lookup Activity and also Copy Activity Web Activity, and Execute Pipeline Activity.
- Experience in Dataflow Components, Control Flow Elements, Connection Managers, and **Triggers**.
- Have Experience in using **Azure Key Vault** and **Logical Apps**
- Integrated Git Repository to automate and improve **CI/CD** process
- Good experience in Data extraction (extract, Schemas, corrupt record handling), transformations and loads (user - defined functions, join optimizations) and Production (optimize and automate Extract, Transform and Load).
- Goodhands-on experience in Databricks by applying transformations using **Pyspark** and **Spark SQL**
- Azure Data Factory (ADF), Integration Run Time (IR), File System Data Ingestion, Relational Data Ingestion
- Experience in programming languages such as Python, with Data Bricks Pyspark, designing and building data engineering workloads to leverage cloud computing, and application of DevOps tooling and frameworks for the building of data pipelines.
- Good understanding of Spark Architecture including Spark Core, Spark SQL, Data Frames, Spark Streaming, Driver Node, Worker Node, Stages, Executors and Tasks.
- Experience in data modeling and Proficient in SQL developer skills in writing stored procedures, functions, transformations etc.
- Design & deploy ETL, ELT jobs to curate, transform and aggregate data to create source models for end user analytics use cases.
- Scheduling automation and monitoring instrumentation for data movement jobs.
- Expertise in various phases of project life cycles (Design, Analysis, Implementation, and testing).

Technical Expertise

- **Azure Platform:** Microsoft Fabric, Azure Data Factory, Data Bricks, Pyspark, Spark SQL, Azure data lake storage, Dataflow Gen2, Lakehouse, Warehouse, Azure SQL, Logic Apps, Key Vaults, Delta live table, Unity Catalog, Synapse Analytics.
- **RDBMS:** SQL Server
- **Programming Languages:** Python, SQL

Organizational Experience:

- Worked as **Data Engineer** in **TCS** from **Dec 2021 TO May 2025**.
- Worked as **Data Engineer** in **CP Axtra Public Company Ltd (CP wholesale India Pvt. Ltd)** from **Jul 2025 TO Feb 2026**.

Education: (2017-2021)

- Completed **Bachelor of Engineering – B.E** from **Vivekananda Collage of Engineering And Technology**.

Project Experience:

Project # 3

Project Name : EUA-Cloud Modernization & EU- ORA
Client : EXELON Corporations
Role : DATA ENGINEER
Project Specific Skills : Microsoft Fabric, Azure Data Factory, Azure Data Bricks, Azure Logic Apps, SQL, Python.

Overview: Exelon is the nation’s largest utility company of USA serving more than 10 million customers through six fully regulated transmission and distribution utilities — Atlantic City Electric (ACE), Baltimore Gas and Electric (BGE), Commonwealth Edison (ComEd), Delmarva Power & Light (DPL), PECO Energy Company (PECO), and Potomac Electric Power Company (Pepco).

We maintain consumer information from a variety of legacy source systems across the organization – characteristic of a “bonding agent” that keeps our virtual data intact and glued together – to ensure we can compile the entire history and relationship with each individual we serve. Data is updated daily through contributing sources and is accessible on a transactional basis. We bring up clean, improvised data for the Business Insights in Cloud using Azure platforms.

Responsibilities:

- Responsible for designing and developing end-to-end ETL and ELT data pipelines within the Microsoft Azure ecosystem, leveraging **Azure Data Factory**, **Azure Synapse Analytics**, and **Microsoft Fabric** for data integration and orchestration.
- Hands-on experience building scalable data engineering solutions using **Azure Databricks (PySpark, Spark SQL)** and **Azure Data Lake** to process, transform, and manage large-scale data workloads.
- Implemented **Databricks Unity Catalog** for centralized data governance, improving data security, compliance, and reducing audit preparation time by 70%.
- Designed and developed **data warehouse and data mart models**, ensuring optimized performance for analytical and reporting use cases.
- Conducted **requirement gathering and feasibility analysis**, translating business needs into technical specifications and delivering end-to-end data solutions from design to deployment.

- Developed and maintained **Logic Apps, Azure Function Apps, and PowerShell workflows** for workflow automation, event-based notifications, and system integrations across enterprise systems.
- Utilized **Azure Key Vault** for securing connection strings, credentials, and sensitive configurations within data pipelines.
- Implemented **CI/CD pipelines** for automated deployment and version control of data solutions, ensuring robust and repeatable releases across environments.
- Created **reusable, modularized code components** to accelerate data development and promote best coding practices across teams.
- Experienced in **data modeling, SQL development**, and building complex stored procedures, functions, and transformations for relational and analytical systems.
- Creating logic app to send email notifications to different users when an event happens in various applications, services, and systems, etc.
- Design & deploy ETL, ELT jobs to curate, transform and aggregate data to create source models for end user analytics use cases.
- Experience in data modeling and Proficient in SQL developer skills in writing stored procedures, functions, transformations etc.
- Experience with MS SQL Server skills.
- Working with Azure key vaults.
- Scheduling automation and monitoring instrumentation for data movement jobs.

Project # 2

Project Name : DATAIntegration

Client : Toyota

Role : ADE

Project Specific Skills : Azure Data Factory, Microsoft Fabric, Lakehouse, ADLS Gen2, Logic Apps, Azure SQL Data Base, SQL Server, Databricks, python, pyspark

Overview: Toyota Motor Corporation is a global automotive industry leader manufacturing vehicles in 27 countries or regions and marketing the company's products in over 170 countries and regions. Founded in 1937 and headquartered in Toyota City, Japan, Toyota Motor Corporation employs nearly 350,000 people globally.

Responsibilities:

- Involved in Business requirement document walk through to understand functionality
- Involved in the **planning, design, and development of ETL/ELT pipelines** using **Microsoft Fabric Data Factory** for data ingestion and orchestration.
- Extracted data from **OneLake (Microsoft Fabric Data Lake)** into **Data Factory pipelines** for downstream processing.
- Call the REST API to get the transaction id for each Batch file.
- Prepare the transformations as per requirement by using data flows (Gen2) within Microsoft Fabric.
- Scheduling and monitoring pipelines through Fabric's monitoring workspace.
- Load the transformed data into Fabric Lakehouse and SQL Endpoint for reporting and analytics

Project # 1

Project Name : HSBC Fusion

Client : HSBC

Role : ADE

Project Specific Skills : Azure Data Factory, ADLS Gen2, Logic Apps, Azure SQL Data Base, SQL Server

Overview:

HSBC is a leading global financial services organization committed to connecting customers to opportunities worldwide. With a strong presence in both established and emerging markets, HSBC supports individuals, businesses, and institutions in managing their financial needs. The company offers a wide range of services including retail banking, wealth management, commercial banking, global banking, and markets solutions. HSBC empowers clients through innovative financial tools, global expertise, and a deep understanding of local economies, helping them thrive in a rapidly evolving financial landscape.

Responsibilities:

- Involved in Business requirement document walk through to understand functionality
- Involved in planning and development of ETL pipelines using ADF.
- Extract the Data from Azure data lake storage to Azure Data Factory.
- Call the REST API to get the transaction id for each Batch file.
- Prepare the transformations as per requirement by using activities and data flows.
- Scheduling and monitoring pipelines.
- Load the transformed data from ADF to Azure SQL data base.
- Involved in daily status calls.
- Importing the data from data sources and preparing the data as per user requirement using power query editor.
- Building the relationships between the various data sets in power pivot.
- Created new columns, new measures and conditional columns using DAX functions.
- Created different filters like visual level filters and page level filters and report level filters as per reporting needs.
